

THE TRANSORAL ACCESS IN ENDOSCOPIC THYROID RESECTION

Kai Witzel

NESA, Berlin / PMU, Salzburg

15th International Congress of the EAES, Athens 4-7 July 2007

Current aspects of open surgery

	conventional	ultrasound
time of resection	78 min.	63 min.
compresses	16,6	4,4
ligatures	26,4	8,2
drain	94 ml	43 ml

LITERATURE:

- bleeding (1,1-3 %)
- lesion of nerve (- 2 %)
- hypoparathyroidism
- hematoma (1- 8%)

Demands on endoscopic procedure

- observe standards of thyroid surgery
- as secure as open surgery
- thyroid gland must be extracted without enlarging the incision
- meet cosmetic demands
- minimally-invasive

Possible accesses in thyroid surgery

Minimally-invasive or endoscopic ?

- Miccoli P, Berti P, Conte M, Bendinelli C, Marcocci C. **Minimally invasive surgery for small thyroid nodules: preliminary report.** J Endocrinol Invest 1999; 22: 849-851
- Henry JF: **Minimally invasive surgery of the thyroid and parathyroid glands.** Br J Surg 2006; 93: 1-2
- Messenbäck FG: **Endoskopische Schilddrüsenchirurgie 2004,** Chir Prax 63,647-57
- Shimizu K, Tanaka S. **Asian perspective on endoscopic thyroidectomy - a review of 193 cases.** Asian J Surg 2003; 26(2):92-100

Instrument and Method

- two human cadavers
- 10 living pigs
- neuro-monitoring in porcine model
- modified axilloscope and an ultrasonic scalpel are used, which permit a total resection of the thyroid gland

The Transoral Access

[Video](#)

Results of Transoral Resection

- proof of feasibility in human cadaver
- complete thyroidectomy in living pigs
- Time of procedure in animal model av. 50 minutes (33 -103 min.)

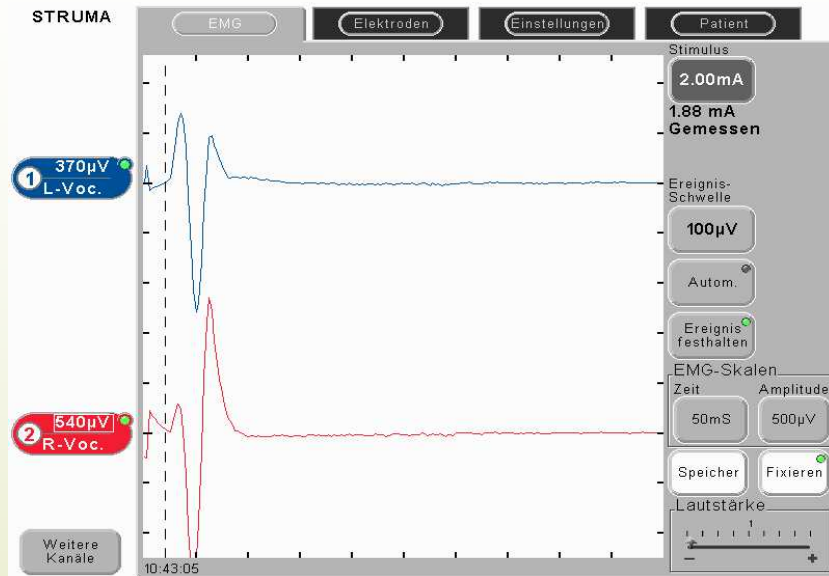

Results II

- Successful Neuro-monitoring in 18/20 cases
- Cosmetic aims
- No complications until 2 hrs. after resection

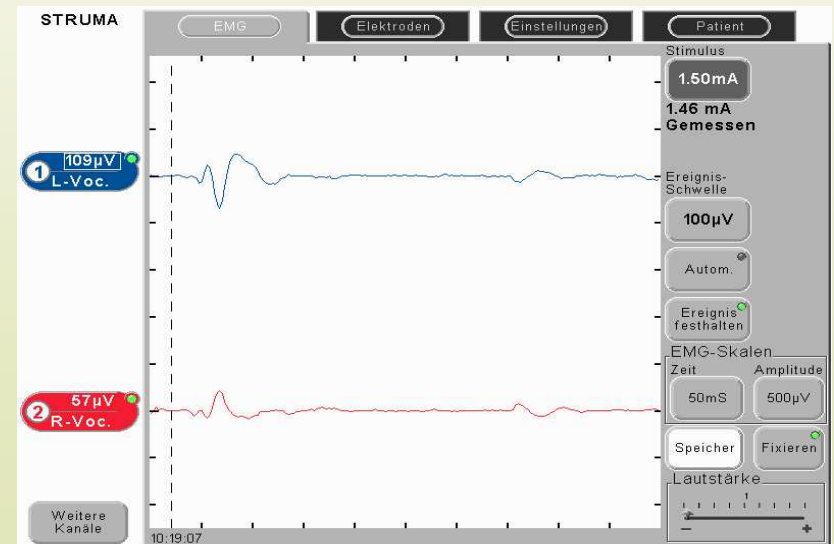

[Video](#)

Importance of neuro-monitoring

Dralle H et al: Risk factors of paralysis and functional outcome after recurrent laryngeal nerve monitoring in thyroid surgery (Surgery 2004;136:1310-22.)

Discussion

- This technique is endoscopic and minimally-invasive
- Is there a higher risk of infection?
- Is the transoral resection possible in patients?
- Long-term-results?

The Future of Thyroid Resection

- minimally-invasive?
- video-assisted?
- ultrasound dissection?
- neuro-monitoring?
- endoscopic?
